

## PRESS RELEASE

# Celebrating Achievements and Launch of the FIELDS Learning Management System

The EU funded project FIELDS proudly announces the launch of its innovative Learning Management System (LMS), marking a pivotal moment in agricultural education. Tailored to meet the diverse needs of farmers, foresters, students, and agricultural professionals, the FIELDS LMS represents a significant step towards enhancing skills and fostering sustainability in the agricultural sector.

**Project Overview:** The FIELDS project, rooted in the Erasmus+ EU programme, is a cornerstone of agricultural education and lifelong learning, catering to individuals across the agricultural spectrum – from seasoned farmers and foresters to aspiring students. It addresses critical skill needs for sustainability, digitalisation, and the bio-economy in agriculture. For more information about the project, click [here](#).

**LMS Launch Celebration:** Designed to support individuals and groups active in agriculture, forestry, and the bio-economy sectors, the FIELDS LMS heralds a new era of innovation and sustainable development. It provides a platform for acquiring both technological expertise and essential soft skills necessary for success.

**Achievements and Milestones:** Offering a single, secure, and integrated system for building customised learning environments, the FIELDS LMS ensures ease of access and continual usability enhancements. Available under the GNU General Public Licence, the LMS is cost-effective, flexible, and continuously updated to meet evolving user needs.

**Pedagogical Approach and Training Modules:** Catering to two primary user groups – farmers, foresters, and farm advisors, as well as students aspiring to join the sector – the FIELDS training programme offers a personalised learning journey tailored to individual needs.

**Training Modules:** The programme features four key modules:

- Bioeconomy Module
- Sustainability Module
- Digitalisation Module
- Soft Skills & Entrepreneurship Module

**EQF Levels and Modular Learning:** Recognising diverse backgrounds and aspirations, the programme offers EQF Level 4 for farmers and foresters, and EQF Level 5 for farm advisors and students. Each module is further segmented to enable focused learning.

In conclusion, the FIELDS Learning Management System offers a modular learning experience, empowering users to tailor their curriculum according to their needs and interests. We look forward to the positive impact this initiative will have on the agricultural and bio-economy sectors.
